SUMMARY

Full Stack Developer with hands on experience building intelligent web applications, automation systems, and AI powered workflows using Python, React, REST APIs, and modern backend technologies. Experienced in developing scalable applications, integrating AI models into real world systems, preprocessing and analyzing datasets, and building responsive frontend interfaces. Strong foundation in problem solving, backend architecture, and AI assisted development workflows through self driven projects involving machine learning, NLP, and intelligent automation systems. Comfortable working independently in fast paced environments while rapidly learning and implementing emerging AI technologies.

SKILLS

- **Programming Languages:** Python, JavaScript
- **Web Development & Databases:** HTML, CSS, React, Vite, Django, Backend API Development, FastAPI, Frontend Integration, Bootstrap, SQLite, PostgreSQL
- **Cloud & MLOps:** AWS, Docker, CI/CD Pipelines
- **Data Visualization:** Matplotlib, Seaborn, Streamlit
- **Development Tools & Version Control:** Git, VS Code, Jupyter Notebook, Google Colab
- **AI & Machine Learning:** AI, Machine Learning, Machine Learning Algorithms, Scikit learn, Pandas, NumPy, NLP, LLMs, RAG, CNNs, RNNs, Neural Networks, LangChain, LangGraph,, Random Forest, Logistic Regression, Naive Bayes, OpenAI

WORK EXPERIENCE

CYPWNG Software Technologies

Mar 2025 - Jun 2025

Full Stack AI Developer Intern

- Developed a scalable web application using Python and Django, integrating user authentication and role based access controls, and automated workflows for 500 patients, reducing manual errors by 30% and increasing data processing speed by 25%.
- Designed and implemented a secure data storage solution using SQLite and PostgreSQL, ensuring 99.9% uptime and processing 1000 database queries per hour, while integrating user authentication and role based access controls using Python and React.
- Collaborated with team members to test, debug, and enhance system features using Git and unit testing tools, leading to more stable releases and smoother deployment of the application.
- Built a RESTful API using FastAPI, handling 200 requests per minute, and integrated it with a React frontend built using Vite, resulting in a 40% reduction in latency and a 20% increase in application throughput.
- Collaborated with a team of 5 to develop and deploy a web application using Git, resulting in 3-5 releases per month, and implemented unit testing and CI/CD pipelines to ensure 95% code coverage and reduce deployment time by 50%.
- Built RESTful backend APIs using FastAPI and integrated React frontend components for real time product and healthcare data management.
- Implemented AI assisted development workflows using ChatGPT and GitHub Copilot to accelerate debugging, feature development, and API integration tasks.

PROJECTS

Intelligent Air Quality Prediction and Health Advisory System

github.com/mounika103_goud/air-quality-advisory

- Developed a Streamlit based machine learning web application that predicts AQI levels using real time environmental data collected via API integration, processed with Pandas and NumPy, and modeled using Scikit learn for accurate air quality forecasting.
- Designed an interactive dashboard with Matplotlib and Seaborn visualizations and implemented personalized health advisory messages based on predicted AQI levels to help users understand air conditions, health risks, and take preventive actions.
- Developed machine learning workflows in Python for preprocessing, prediction, and health risk analysis using Pandas and Scikit learn on large environmental datasets.

Fake News Detection System using NLP and Machine Learning

- Built a supervised NLP based text classification system using Logistic Regression, Random Forest, and Naïve Bayes to automatically detect and flag misleading or false news articles based on linguistic patterns and content structure
- Developed an end to end Python pipeline including text cleaning, tokenization, TF IDF vectorization, model training, evaluation, and integration of credibility indicators to ensure scalable, accurate predictions and reduce misinformation spread.

EDUCATION

Sphoorthy Engineering College

Bachelor of Technology, Computer Science & Engineering (AI & ML)

Sep 2022 - Apr 2026

Hyderabad

CERTIFICATIONS

- **Python Programming Certificate: 2024**
- **Introduction Artificial Intelligence: Great Learning, Mar 2024**
- **Full Stack AI Developer Intern: CYPWNG Software Technologies**
